

Amendments to the claims:

Claims 1-14: (canceled)

15. (new) A system composed of a guard (16) and a power tool, wherein a rotation-prevent means (20) is provided with a blocking means (32, 40) on a guard side and with a corresponding stop means (32, 42) on a power tool side.

16. (new) The system as recited in claim 15, wherein the rotation-prevent means (20) can be triggered by an insertion tool (14) acting on the guard (16).

17. (new) The system as recited in claim 15, wherein the entire rotation-prevent means (20) is located inside the guard (16).

18. (new) The system as recited in claim 15, wherein the rotation-prevention means (20) is provided so that blocking of rotation of the guard is independent of a tightening torque used to attached the guard (16).

19. (new) The system as recited in claim 15, wherein the rotation-prevention means (20) limits rotation of the guard (16) to a narrow angular range.

20. (new) The system as recited in claim 15, wherein the rotation-prevention means (20) entirely prevents rotation of the guard (16).

21. (new) The system as recited in claim 15, wherein the guard (16) can be fixed in any position in a limiting groove (34).

22. (new) The system as recited in claim 15, wherein the blocking means (32, 40) and stop means (34, 42) are aligned correspondingly to each other, so that an angular range within which rotation is permitted can be actively specified.

23. (new) The system as recited in claim 15, wherein the blocking means (32, 40) on the guard side and the corresponding stop means (34, 42) on the power tool side are connected by a form closure.

24. (new) A power tool with an electric motor located in a housing (10), the electric motor rotatably driving an insertion tool (14), wherein a rotation-prevention means (20) is provided that at least prevents the insertion tool (14) from being released in a direction of an operator.

25. (new) The power tool as recited in claim 24, wherein the rotation-prevent means (20) includes a stop means (34, 42) for the blocking means (32, 30) that corresponds with a blocking means (32, 40) for a guard (16).

26. (new) The power tool as recited in claim 24, wherein a collar (24) includes an insertion groove (36) with a limiting groove (34) located at an angle thereto.

27. (new) The power tool as recited in claim 24, wherein a stop (42) that projects outward at an angle is provided on the housing (10).

28. (new) An angle grinder with a grinding disc, wherein the grinding disc is covered at least in some areas by a guard (16) as recited in claim 15.
